

Arai
HELMET®

20
24

Since 1937, Arai is a family company, driven by the same family, with the same mission, through three generations of riders : build the best possible helmet.

Every Arai helmet is inspected by different quality inspectors to ensure that the customer gets a perfect finished product.

In every Arai shell you will find the signature of the craftsman who made it. You may never see it, but it is here!

Their mission were always been the protection and comfort of riders, that's all!

ECE R22-06

© JAVI ECHEVARRÍA

Since 2003, the ECE-2205 norm was the motorcycle helmet homologation approval in Europe. After 18 years of validity, it has become obvious that this norm would need an upgrade to fit to the new helmets standards. Indeed, since 2003, the motorcycle helmets have been improved significantly with quick releases, multi-density EPS and so on. On the other hand, some innovations have appeared to be used as sales features such as integrated sun visor or modular helmets for example.

At ARAI, we have always been focused on the most important feature of an helmet: the rider protection. We have always think an homologation is a minimum what a helmet should do and we are always looking for improvements, real world accidents. This is the reason why we have constantly been looking at improving year after year the safety performance of our helmets.

In 2021, the ECE-2205 homologation had "evolve" to ECE-2206 in order to meet new standards and increase the rider's protection. We have been looking for these improvements for 3 generations, and that's how we managed to have the world first helmet passing this norm already in mid-2021. Already 18 years ago, ARAI was the first helmet manufacturer to have an ECE-2205 & SNELL approved helmet (RX-7GP). This shows once again that ARAI's obsession has always been to protect the riders.

© ARAI

WHAT IS GOING TO CHANGE?

This ECE-2206 is a more stringent approval, testing helmets with additional crash-test, new impact points, more diversity of speed and impact surface.

- **NEW IMPACT POINTS:** Addition of 12 impact points, which will increase the overall helmet testing and prevent helmet manufacturers to build helmet focused on very few impact point. We know at ARAI that crashed are unpredictable.

- **ADDITIONS OF SPEED TESTING:** Addition of high and low velocity tests. Kinetic energy goes up in proportion to the speed, which means that the ECE-2206 is more depending on the impact dispersion. On the other hand, the low speed impact is important for the EPS liner, to absorb when the outer shell has not much opportunity to crack and divide the energy, the EPS liner has to absorb most of it.

- **ADDITION OF AN OBLIQUE IMPACT TEST:** This test is the first one that is considering what we always have been truly believed in the most important feature of an helmet performance, we refer to "Glancing Off". As soon as the helmet hits the anvil, the direction is changed from vertical to horizontal. By having a rounder and smoother shell, the helmet will bounce off, this is one of the reasons why ARAI has been the first one to pass this new regulation, we have always been focused on rider safety.

WHEN WILL THAT CHANGE?

Due to the pandemic, the activation of that new homologation became a real challenge for several helmet manufacturers. But there is no official announcement on the change of the initial plan which is:

- **From July 2022** it is no longer possible to approve or extend according to the ECE-2205 series.

- **From July 2023** it is no longer allowed to use the approval numbers from the ECE-2205 series.

- **From January 2024** it is prohibited to sell ECE-2205 series products by contracting parties. Sooner or later, all the rider gear industry will have to adapt to this new standard. ARAI is once again demonstrating its capacity of manufacturing the best helmets in the world by having homologated the first ECE-2206 approved helmet in 2021, available on the market 6 month ahead of any other brand. By 2022, ARAI will be able to provide 2 models homologated with the plan to have the full range ECE-2206 by 2024.

ECE R22-06

You will find this logo indicating ECE 22-06 homologated helmets in the catalogue

FIM 2	8009201001	8009201002	8009201003	8009201004	8009201005	8009201006	8009201007

ARAI presents the best helmet made for competition.

The new RX-7V RACING is going a step forward thanks to a new technologic feature: the Aerodynamic assist.

This new aerodynamic spoiler homologated FIM facilitates the air flow from the back of the helmet and the racing suit bump:

- Improvement of the Air Flow
- Faster is the speed, more the air-effect is perceived
- New design for the rear ventilation

OTHER FEATURES :

- FIM homologation: ARAI is one of the only brand able to provide the FIM homologated helmet to any riders.
- This homologation is not fundamentally changing the helmet from a RX-7V standard. One of the few difference is the friction ratio between the two shells to allow a better head rotation within the helmet.
- The size range is from the XS to 3XL, (the exact same sizes as the regular RX-7V)

ARAI awarded from the FIM gold medal

ARAI is the first brand that has been awarded from the FIM as a security manufacturer for the riders.

This medal has been given to Michio ARAI for his "achievement in contributions to the safety of many riders and numerous advancements to motorcycle sports over many years"

Made for competition

RX-7V EVO

© LIONEL BEYLOT

OUTER SHELL : PB SNC²

Super Fibre and other special synthetic fibres, with superb tensile strength and flexibility characteristics, developed for F-1 helmet, are assembled and bonded by Arai experts, to create stronger and lighter shell.

DIFFUSER TYPE 12

20mm longer, compared to the previous model, their efficiency is increased by 19%. New Air Wing to improve stability. Adjustable : 3 positions; closed, half open and open but also help to improve sealing that decreases wind noise and water intrusion.

ECO PURE LINER

The fully removable interior liner system has been improved with new Eco Pure antibacterial material, which helps maintain neutral acidity levels close to human skin. Softer and deeper new liner for great comfort. Adjustable temple padding that allows to customize fit.

STRONGER SHELL ADVANCED BY THE LATEST TECHNOLOGIES

From extreme ventilation to unmatched comfort, among numerous other advances you expect in our RX-7V EVO model.

AIR CHANNEL

Enhanced air exhaust from the eye port area, pulled through dedicated air channel to side cowl-6, improving efficiency and reducing noise.

FULL SUPPORT INTERIOR

FCS Cheek pad with ear pocket recess for speakers and 5mm peel away layer for added room if needed. Larger space in mouth area for a more open feeling. New emergency release tab positioned at the end of the release strap for easier access by rescue staff. Improved comfort performance with better fitting while being easier to put on and off.

CHIN COVER

The curtain simultaneously blocks air intrusion from turbulent air below and increases negative pressure to enhance the inner air extraction and reduce noise.

IC DUCT5

The new IC Duct5 provides 11% more airflow than the previous Delta Duct5. The new bigger switch makes opening and closing easier. The new IC duct-5 has three positions; closed, half open and fully open to adjust the airflow and prevent water intrusion when fully closed.

VAS V MV SHIELD

VAS MAX Vision shield, very shock resistant, is provided in clear version for better visibility in all seasons. Comes standard with Clear anti-fog Pinlock insert to be installed as needed.

Full face helmets

RX-7V EVO

Years of experience for the ultimate helmet!

The RX-7V EVO represents the summit of Arai's knowledge, experience and knowhow in helmet technology. With a completely new PB-SNC² outer shell, the revolutionary VAS (Variable Axis System) visor system and a significantly increased smoother area around the temples, the RX-7V offers the new benchmark in the premium helmet segment.

- PB SNC2 Shell: Super Fibre and other special synthetic fibres, with superb tensile strength and flexibility characteristics, developed by ARAI.
- Diffuser Type 12: New Type 12 diffusers are 20mm longer and straightened for improved aerodynamics, working together with the Air Wing to improve stability. Compared to the previous Type 10 diffusers, the efficiency of the intake scoops of the new Type 12 diffusers has increased by 19%. The new air intake vents not only have more adjustability with three positions; closed, half open and fully open but also help to improve sealing that decreases wind noise and water intrusion.
- Eco Pure Liner: The fully removable interior liner system has been improved with new Eco Pure material, which helps maintain neutral acidity levels close to human skin and antibacterial consumption.
- VAS V MV Shield: VAS MAX Vision shield is standard to provide better visibility in all seasons and for all types of riding. Comes standard with Clear anti-fog Pinlock insert to be installed as needed.
- Washable interior
- Double-D ring device
- 5-year limited warranty

* WARNING* The RX-7V EVO model have an extra shell size, the sizing chart (cm) are shifted one size from the L size chart

VENTILATION

Comprehensive and controllable ventilation is based around 12 ventilation ports: 6 intake, 6 exhaust. The 3D Arai logo feeds cooling air into two central intake points and works well at low speed, alongside dual F1-derived tear duct top intakes, twin brow vents and 2-position sliding air-scoop, filtered chin vent. Hot air is efficiently extracted via the 3-way one-piece rear exhaust/ spoiler, twin flush-fit side exhausts (with foam dams to reduce noise) and neck exhaust.

PB E-CLC OUTER SHELL

PB e-CLC (Peripherally Belted e-Complex Laminate Construction).

The PB e-CLC outer shell design outlines a stylish, organic shape and uses a Peripherally Belted e-Complex Laminate Construction for lightweight strength; it's designed to glance off and spread impact forces. New materials have been used to substitute the AR-mat as middle layer, resulting in a substantial weight reduction while maintaining the same strength as the PB-cLc construction.

3D ARAI LOGO DUCT

Immediately noticeable, the new 3D Arai logo duct (just 3.5mm in depth) feeds two central 10mm intake ports. This is a first in an Arai, and entirely due to PB e-CLC's strength and the shell construction. It also works very well at low speed and with an upright riding position; at just 50km/h it's channelling an extra 40% airflow, at 120km/h 7%. If the rider can't see the lever and the logo is in its normal place, the duct is open. The Arai logo duct is designed to breakaway in the event of an impact.

© LIONEL BEYLOT

REPLACEABLE INTERIOR

The complete interior may be easily removed. All parts (replaceable or not) can be cleaned with lukewarm water and mild soap. Rinse well after cleaning and never dry in direct sunlight or near a heat source. Interior parts in different size thickness are available for a custom fit for every rider.

REAR EXHAUST/SPOILER

The one-piece rear exhaust/spoiler, operated by a 3-way switch, is inspired by the DX-2 of the RX-7V Racing, but redesigned for touring use – however, it was tested up to 300km/h at Suzuka. It is fed by 3 ports in the shell. As part of the Quantic's comprehensive ventilation system it efficiently draws air but also smooths airflow over (and from the side) of the helmet, improving stability and reducing buffeting. The result is much less rider fatigue. It's designed to crush or break away upon impact, therefore having no impact on protective performance.

AIR-SCOOP CHIN VENT

Also new is the 3-position (open, midway and closed) sliding air-scoop chin vent which flows a larger intake volume of air and has a replaceable filter. The actuating mechanism is thicker and easy to use with gloves.

Full face helmets

QUANTIC

The new Arai Quantic – as the mathematical definition describes – draws together in harmony the qualities and design elements found in helmets throughout the Arai range, while adding fresh features all of its own.

The Quantic offers a new choice for riders that want the very best helmet – in terms of protection, performance, comfort and ease of wear – without compromise. Using the aerodynamic and protective abilities of Arai's full-race helmets, and all the experience and know-how earned over millions of road kilometers, the Quantic joins race and road specification together in sleek, beautiful form.

- Aimed at the sports-touring rider who wants dynamic, race-derived performance
- With luxurious comfort and features suitable for long riding days
- E-Complex Laminate Construction (e-cLc) outer shell with VAS
- Glancing Off concept: increases the ability of glancing off objects, without transmitting shock energy to the rider
- New 3D Arai Ventilation logo
- New Dual 'tear duct' top intake vents
- Two-position sliding chin vent
- One-piece rear exhaust/spoiler
- New Dedicated shell area to accommodate communication device
- ECE R22-06 approved

SPEAKER POCKET

Build in communication systems are popular, but the problem is often that the room for a speaker is limited or just not present, causing unpleasant pressure points. The Renegade V is equipped with special speaker pockets, offering room for mounting speakers without effecting comfort or fit. (Speaker not included).

OUTER SHELL : PB E-CLC

The Concept-XE's outer shell uses a Peripherally Belted e-Complex Laminate Construction (PB e-CLC) for lightweight strength; it's designed to glance off and spread impact forces. New materials have been used to substitute the AR-mat as middle layer, resulting in a substantial weight reduction while maintaining the same strength as the PB-e-CLC construction.

PEEL AWAY PADS

5mm thick removable foam layer on the ear cups/cheek pads and temple pads. Offering more room if desired without the need to purchase an optional headliner or new pads/ear cups.

ANTIBACTERIAL LINER

The fully removable antibacterial interior liner system has been improved, helps maintain neutral acidity levels close to human skin. Softer, deeper and more comfortable fit the new liner also has adjustable temple padding that allows for a customized fit.

VARIABLE AXIS SYSTEM (VAS)

With VAS, the visor mounting position is lowered, yielding an average of an additional 24mm across both temple areas, in pursuit of the ideal smoother shape that increases the ability of glancing off energy.

NEW VENTILATION SYSTEM

The Concept-XE features an exclusive ventilation system that is unique to this model. It is instantly recognizable by the large intake duct (reclodable) on the front part of the helmet. The large inlet allows generous amounts of cool, fresh air to enter the helmet, assisted by the large single frame rear duct. The exhaust function of the large front duct keeps working when the intake is closed. The two small exhaust vents on the back of the helmet help to quickly dispose hot, warm air from the helmets interior.

FACIAL CONTOUR SYSTEM

To offer an even better snug fit and enhancing the comfort to the lower jaw, the Facial Contour System (FCS) works with a foam spring support in the cheek pad that compresses and rebounds

Full face helmets

CONCEPT-XE

© LIONEL BEYLOT

A cutting-edge technology that look vintage !

While a homage to the classic style of the 1980s, the Concept-XE is equipped with all the latest protection and comfort. A simple and sophisticated form that is not categorized by any genre. In addition to Arai's first inner ventilation system, it features a full system interior which has almost the same materials as racing models. A "Neo Classic" helmet that is not only for classic bikes and cruisers but also compatible with the latest motorcycles.

- PB-e cLc outer shell, constructed of Arai's original super fiber and a newly developed resin
- New Arai vent system : three exhaust holes are provided on top so that air passes through the air channel in the liner and is exhausted efficiently through the slit at the back of the head by negative pressure caused when riding. The highly efficient ventilation is realized while maintaining a simple and clean surface
- Glancing Off concept: increases the ability of glancing off objects, without transmitting shock energy to the rider
- VAS MAX Vision visor, enhanced visibility in all seasons and for all types of riding, Pinlock Ready
- VAS system : compact visor with Variable Axis System, better protection in the temple areas, without compromise on visual field
- FCS Facial Contour System : perfect fit for every kind of face
- Multi-Density EPS inner liner
- Anti-bacteria, anti-fouling and deodorant properties Ecopure interior. Fully removable and washable
- "Peel away" 5mm thick removable foam layer. Offering more space if desired without the need to purchase an optional part
- Emergency Release System (ERS)
- Hand crafted
- The Concept-XE has widely outperforming all standard tests : Main Arai goal is making the safest helmets in the world
- 5-year limited warranty
- Suitable with PSS (Pro Shade System) visor : the all-weather solution against fogging, misting and sun-glare - Available separately

2024

TOUR-X5

© LIONEL BEYLOT

SHARPER LOOKING AND MORE COMFORTABLE.

TOUR-X5 PEAK

The all-new peak is designed for more effective ventilation, increased high speed flow-through performance, greater range of adjustability for blocking the sun, and is more resistant to buffeting, all of which leads to an overall more comfortable riding experience.

VAS-A VISOR SYSTEM

This new visor system allows for easier and faster visor swaps. The visor can be attached or removed without the need for any tools. The peak utilizes only one screw on each side for removal/installation.

TOUR-X5 MOUTH SHUTTER

The opening area for the TOUR-X5 mouth-shutter doubled compared to the TOUR-X4. Thanks to the evolution in shell strength from the previous generation, the aperture could be made larger, and the mouth shutter could be made to flow more fresh air without the need for the mesh vents as seen on its predecessors.

SPEAKER POCKET

Speakers can be installed directly to the provided hook & loop panel without the need to remove the cheek pad covers. Both ear pockets are deep and wide, designed to accommodate even the thickest speakers with plenty of room to position them to increase comfort.

AR SPOILER

Set in a position that makes it ideal for adventure riding, the AR spoiler contributes to reducing fatigue from turbulent air throughout long rides, and works to draw out hot air from the crown area.

ODOR-RESISTANT INTERIOR

The TOUR-X5 utilizes an interior liner that has the same level of acidity as bare skin and has odor resistant and stain-resistant properties. The headliner is equipped with a removable foam layer on both the left and right sides, allowing you to remove 5mm of foam from each side if desired for micro-fitting.

FRONT LOGO DUCT

The effectiveness of conventional forehead vents could be limited by the rider's position, but with the front logo duct, airflow is unaffected by changes in riding position. Thanks to advances in shell technology, we can add holes in the forehead area for this vent without compromising the helmet's ability to protect.

VAS-A MAX-VISION VISOR

The new max-vision visor preserves the wide field-of-view and high level of visibility expected of an Tour-X5 model. The Pinlock insert for this model has advanced to be effective at resisting fogging, even in extreme conditions, across the entire field of view.

Full face helmets

TOUR-X5

© LIONEL BEYLOT

Adventure, on-road, or off-road: the TOUR-X5 has a ventilation style that consistently exudes a sharp appearance. Enhancing the field-of-view from the previous generation, the TOUR-X5 visor is even wider than the TOUR-X4 visor. Many features on the TOUR-X5 have evolved to provide an even more comfortable riding experience.

The forehead area of the shell is reinforced by a Super Fiber belt which is similar to the way in which bands strengthen a barrel. Not only that, but the PB-cLc² shell is meticulously assembled using an assortment of materials so that it can be not only strong, but also lightweight. The shells are handmade by our experienced shell experts, carefully arranging each and every piece of material to create an Arai shell.

The amount of energy that any helmet can absorb is inherently limited and we believe in a crash the only option is to have the helmet glance in a way that directs the impact energy away from the inside of the helmet.

The shell of the TOUR-X5 is designed to be round so that it can more easily 'glance off' impact energy in an actual crash.

When faced with the rare event of an impact, the VAS-A visor system of the TOUR-X5 has been lowered to further improve 'glancing off' ability. So that our helmet may 'glance off' more impacts, even if it is just a slight improvement, the temporal region of the TOUR-X5 has been smoothed out more than on its predecessor. This change further realizes the ideal form for 'glancing off'.

Open face helmets

829 CHF

	XS	S	M	L	XL
Diamond white	8009034001	8009034002	8009034003	8009034004	8009034005

For riding professionals, long-range tourers and urban commuters alike, the Arai SZ-R VAS EVO has become the choice of premium open-face helmets. It's easy to see why. The combination of protection, light weight, comfort and open, all-round visibility make the SZ-R VAS EVO a unique, and special, proposition.

2023 sees the SZ-R VAS gain ECE R22-06 approval and EVO status, without significant changes. Arai's Priority for Protection, the core design philosophy of producing rounder, smoother and stronger outer shells to improve 'Glancing Off' performance, is key in this attainment, as is the rigorous in-house criteria that all Arai helmets must satisfy.

As with each and every Arai, it's the sum of the details coming together to produce an even greater result than their sum that makes the SZ-R VAS EVO the benchmark open face helmet it is. The Variable Axis System (VAS) design effectively lowers the visor pivot point by using a dual pivot assembly. This allows the shell to be smoother around the critical temple area.

The PB-CLC2 outer shell itself is manufactured using a special Z compound of various resins, and balanced by a lightweight inner liner, that lowers the centre of gravity.

Comfort in the SZ-R VAS EVO is supreme over long distances, thanks to interior contact points that cradle the rider's head evenly. The interior is also fully adjustable and designed for the use of glasses and speakers. Ventilation is taken care of by the same diffuser technology as used by the flagship racing-spec RX-7V EVO, with an added aero stabiliser.

The SZ-R VAS EVO comes with a Pinlock insert included.

■ Anti-fog lens

PINLOCK®

Pinlock offers a fantastic solution against shield fogging. Fogging can easily occur because of the difference in temperature inside and outside your helmet and your moist breath.

- Pinlock Original insert is made of a moisture absorbing plastic : surface basically dry when used
- Pinlock insert has a silicone seal : creates a double shield system
- Air-tight pocket ensures that the difference in temperature becomes significantly lowered
- Pinlock insert absorbs moisture on the inside and offers you continuous clear visibility

LENS COLOR

CLEAR

This insert offers you clear and fog free vision under normal weather conditions

LENS COLOR

LIGHT SMOKE

This lightly tinted insert offers you comfortable vision under partially cloudy skies conditions

MAX VISION

100% MAX VISION

- Maximum field of view
- The lens is fully integrated inside the shield
- No false light leakage

LENS COLOR

DARK SMOKE

This dark tinted insert provides excellent protection against the most brilliant of sunshine

PROTECTINT

ProtectINT™

This photochromic insert tints under the effect of UV lights. As the UV light becomes stronger, the insert will tint darker.
